unless you generate it randomly. Just think what to do with your password:

Your pet?

The place you get birth?

The name of your best friend?

You child's birthday?

You favorite fruit?

Or anything else related to your life, you work?

Method 2: Recover Windows Password with the software

When you feel exhausted at guessing so hardly, why not try another easier way? Of course, using a professional [Windows Password Recovery](http://www.recoverlostpassword.com) Tool is your best choice. Its easy-to-operate yet effective functions make it recommended by thousands of users all around the world. Just follow me to see the step-by-step directions, and I am sure it will get you out of this predicament:

Note: here you need the help of another computer which you can access to Windows to accomplish the whole process.

Step 1: Download Windows Password Recovery, setup and run it on the accessible computer. Don't forget to insert a blank CD.

Step 2: On the main interface, there are two recovery modes for your choosing. Choose the one you want. And tick "CD/DVD".

Step 3: Start burning a bootable CD by clicking on "Burn".

Step 4: Insert this CD to the computer you can't access to and boot it from CD. You will enter the interface of Windows Password Cracker under Win PE.

Step 5: follow the wizard to select your system and account you'd like to reset password. Click "Reset" and then "OK" in the next popup.
